DETAILED ACTION***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-45 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 23-36 of copending Application No. 09/703,457. Although the conflicting claims are not identical, they are not patentably distinct from each other because 09/703,457 teaches a stage assembly that moves a device along an X axis and a Y axis comprising a guide base, a stage, and a stage mover connected to the stage to move it relative the guide base, including a Y housing mover that includes a magnet that is fixed to the guide base and a conductor that is secured to the stage and moves relative to the magnet array, wherein the magnet has a length that extends along the X axis and conductor has a length along the X axis and the magnet length is greater than the combination of the stroke of the stage and the conductor length. 09/703,457 does not explicitly state that the mover moves the stage only along the Y axis relative to the guide base, but movement in the along the Y axis is taught and it is obvious that the Y axis movement can be the only direction of movement of the stage mover.

Art Unit: 2881

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.
